I am a 12 year old boy from Algeria, Bouzeguene and I suffer from a disease called acute myelocytic leukemia type 2. I had a chemotherapy twice without any result.

The hospital recommends a transplant of the bone marrow. Further to HLA analysis across the siblings no compatibility has been found. I launch an SOS to the world for my survival:

- search for a graft (HLA determinants, for more information you can find clinical summary attached below)
- call for your generosity to finance the surgery in a specialized hospital.

Thank you with all my heart to all of you.
